

Clark et al 2017 RG Notes

Clark, William Roberts, Matt Golder, and Sona N. Golder. “The British Academy Brian Barry Prize Essay: An Exit, Voice and Loyalty Model of Politics” [2017].

British Journal of Political Science 47(4): 719-748.

Models exist to identify patterns through recognizing commonalities across otherwise distinct phenomena

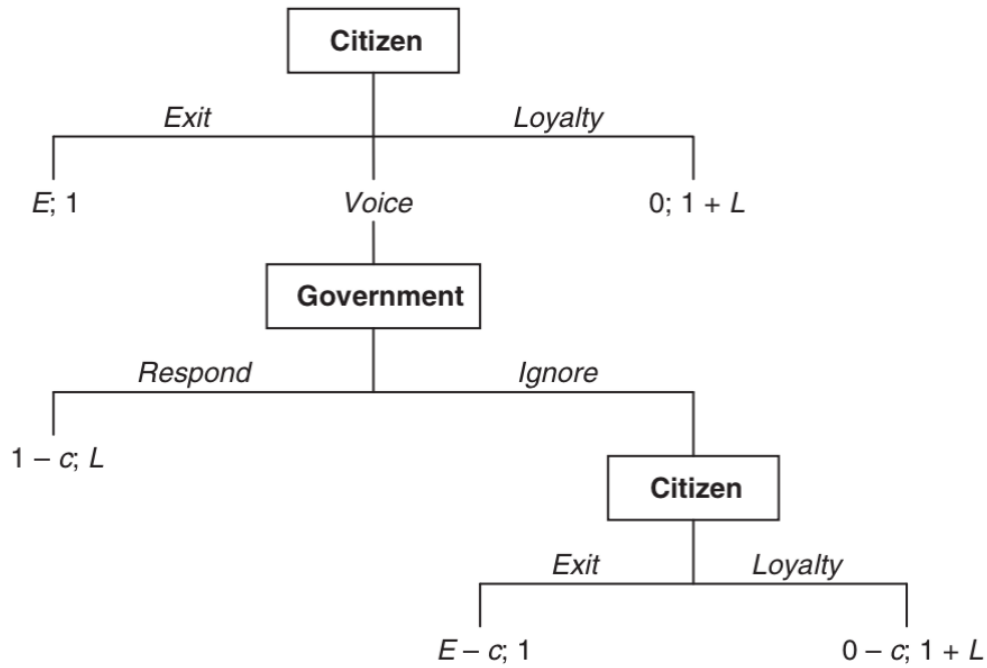

Article provides a formalization and extension of Hirshman’s *Exit, Voice, and Loyalty* (EVL) framework — the options individuals have when facing a deteriorating environment

Three departures of this model from EVLN (n = neglect):

- (1) Considers strategic interaction between actors on both sides, rather than just the dissatisfied actor
- (2) Collapses “neglect” into “exit”
- (3) Focus on institutional arrangement without considering normative / social-psychological foundation of EVLN

“In effect, the decision to respond to a deleterious change with exit, voice, or loyalty is always a political decision. **Politics does not just begin when voice is chosen; it begins when voice is considered.**”

Formulation of a sequential game, whereby the government can respond to voice (and the citizen can respond again):

“It is the citizen’s credible exit threat that makes the effective use of voice possible. A dependent government responds positively only because it knows that the citizen will exit if it ignores her use of voice.
